

M1 — Team Charter

Project name: InfoCenter

Team name: ByteSquad

Members: HTET WAI YAN (6931503004)
ANANSIT INTA (6931503084)
AUNG PHONE PYAE OO (6931503091)
KUNUT WONGTIDATORN (6931503026)
SWAN NAING AUNG (6931503096)

PROBLEM

People who frequently search for information online have difficulty finding reliable and up-to-date information because relevant information is scattered across multiple social media platforms. They often need to search and compare information from different sources to find the specific information they need.

Who exactly has the problem:

People who have to receive important information from many different sources, especially newcomers to an organization, such as a new student or new hire.

Why it matters / what it costs them today:

Users may spend significant time, especially when they are in a rush, searching across multiple platforms and checking different sources. They may also encounter conflicting, outdated, or unreliable information.

REACHABLE USERS

- | | | |
|-------------------------------------|-----------|--------------------------------|
| 1. MUCHCHIM THAONAM (MFU student) | In Person | September 3 rd 2026 |
| 2. MANISH KUMAR MAHTO (MFU student) | LINE | September 3 rd 2026 |
| 3. THANAKORN THAIDEE (MFU student) | Instagram | September 3 rd 2026 |

FUNCTIONAL REQUIREMENTS

4 planned functional requirements:

FR-1: The system shall gather information from the source selected by the user via URL links.

FR-2: The system shall show information gathered from the user's selected source to the user.

FR-3: The system shall let the user create a label and assign it to every submitted source, and the user shall be able to toggle which labeled sources shall be shown.

FR-4: The system shall allow the user to filter posts using keywords to exclude or include certain types of posts.

Which FR carries a real rule or decision (not plain CRUD)?

FR-1 and FR-2 - the system shall provide a way for a user to receive information from their desired source at once.

What data has to persist between sessions?

User preferences, saved sources, and saved information/results.

ACCESS

Any data, licence or system you depend on — and how you know you can get it:

The project will depend on information from selected online sources. The team will verify the availability and permitted use of the required data before development.

PROCESS & TEAM

Chosen SDLC: Reuse-Oriented Development — We will reuse and integrate existing software components, libraries, APIs, and AI services where appropriate instead of developing every component from scratch. (Since it can be less risky for us)
